

Community Needs Assessment

Our Community Needs Assessment documents whether a demonstrated community need exists for additional physicians within a defined geography. As we work with legal counsel across the country, we are finding that the “shelf life” of the Community Needs Assessment has continued to evolve. Minimally, we recommend re-defining the Centers for Medicare and Medicaid Services (CMS) area and updating the Community Needs Assessment on an annual basis.

What We Do

- Define your CMS service area based on the Hospital’s most recent patient origin data
- Understand the age and gender make-up of the CMS service area
- Project the demand for physician services across your CMS service area using 3Dhealth’s Physician Demand Model
- Inventory the supply of physicians, regardless of hospital affiliation, within the CMS service area
- Determine whether a demonstrated community need exists across each physician specialty within the CMS service area
- Issue the industry’s most compliant Community Needs Assessment

What You Can Expect

- A compliant service area definition
- The industry’s most accurate Community Needs Assessment
- The comfort of a third-party opinion
- A 6 week turn-around
- The option to complete on a single specialty basis within 2 weeks
- Our 365-support
